

ABHINAV RANA

Lead Software Engineer — Agentic AI & Backend Platforms

Software engineer with 8+ years across systems, backend, and AI. I build backend platforms, agentic AI systems, and reliable execution flows with a bias toward strong contracts, durable orchestration, and calm production behavior when the happy path ends.

SKILLS

Agentic AI

MCP · RAG · LangChain · tool orchestration · LLM routing

Backend

Go · Python · gRPC · REST APIs · GraphQL · PostgreSQL

Systems

C++ · distributed systems · migrations · debugging · reliability

Infrastructure

AWS · Docker · CI/CD · Nginx · Envoy · SageMaker

EXPERIENCE

Persistent Systems · Lead Software Engineer

Oct 2024 – Present · Bengaluru, India

Client: Intuit — Recipe (Data Curation / Developer Platform)

Apr 2026 – Present

- Sole engineer designing and building an agentic Slack support bot for the Recipe platform across topics, pipeline configuration, asset and recipe creation, and UI workflows.
- Architected an orchestration loop that answers from a RAG knowledge base first, then investigates through MCP tools over Git, Splunk, Jira, and internal diagnostics when evidence is missing.
- Built a custom MCP server exposing manual diagnostic actions as agent tools, reducing repeated human triage work and creating a path toward a more AI-native internal platform.
- Executed a manual blue-green Aurora PostgreSQL major-version upgrade from v11 to v17.9 with zero data loss.

Client: Vuclip (OTT Platform)

Mar 2025 – Mar 2026

- Owned backend development across multiple Go microservices handling retail provisioning and subscription lifecycle management at scale.
- Designed and implemented a Semi-Managed Subscription system automating deactivation, suspension, and resumption from per-partner configuration.
- Extended partner-facing REST flows and drove migration of legacy subscription services from Java to Go.
- Coordinated end-to-end and production validation with zero critical post-release incidents while also remediating security vulnerabilities across repositories.

Client: NewRelic (Developer Platform)

Nov 2024 – Feb 2025

- Built CI/CD infrastructure with automated Trivy scanning and rebuilding of vulnerable Docker images.

CSG · Senior Software Development Engineer

Dec 2023 – Oct 2024 · Bengaluru, India

Charging System Orchestration

- Led design and delivery of Go microservices for scalable backend solutions.
- Designed and implemented payment and reservations for the CSO microservice, integrating multiple services through REST APIs across the payment and reservation lifecycle.
- Improved communication, scalability, and operational reliability across telecom billing flows.

AWS

MachaniRobotics · Software Developer — Robotics & AI

Jan 2021 – Dec 2023 · Bengaluru, India

Genesis / Gaia / ApexDrive

- Re-architected a monolith into a Dockerized mono-repo and improved delivery efficiency across the robotics software stack.
- Built Gaia, a Go gateway using gRPC, GraphQL, Protocol Buffers, Nginx, and Envoy for authentication and request orchestration.
- Developed ApexDrive, a C++ limb-driver microservice for precise humanoid motion control.
- Improved facial-recognition pipelines and integrated ChatGPT APIs with TTS and STT for robot interaction.

Oracle · Software Developer (Systems)

Jul 2018 – Dec 2020 · Bengaluru, India

vSTP / SIGTRAN stack

- Built features in a 3G signaling stack covering SIGTRAN SCCP, packet segmentation, and firewall management.
- Improved data transmission reliability and reduced operational risk across the signaling network.
- Automated test suites in Python to improve code coverage and system reliability.

Oracle — IT Intern

Aug 2017 – Jun 2018

- Worked on point-of-sale software features, upgrades, and test validation for retailer-facing systems.

SELECTED PERSONAL WORK

Clotho

- Multi-tenant agent platform built on compiled-plan orchestration with typed execution graphs and human approval before execution.
- Includes pgvector memory, BYOK AES-256-GCM vault, multi-provider routing, and durable execution.

chotu.studio / auto-shorts

- AI studio that turns a creative brief into a finished short through a 7-stage orchestrated DAG.
- Includes durable run-ledger, crash recovery without double-billing, and documented 545 backend + 458 frontend tests.

chotu

- Mobile-native agent-graph builder with DAG validation, River job queue, memoization, and W3C-PROV provenance.

EDUCATION

- Master of Computer Science — Amrita University · 2016–2018 · Coimbatore · CGPA 8.0
- B.E. Electrical & Electronics — Vinayaka University · 2009–2013 · Salem · CGPA 6.5
- Diploma in Java — NIIT · 2013–2014 · Bengaluru · CGPA 7.0
